A marble game board and field of play for two to four players six years and up, which allows luck and chance along with marginal skill to enable all players to enjoy hours of play. A marble playing board with 109 perforations, each with a circular diameter of 3/8" for marbles is provided. The marble game board is divided into four differently colored triangular sections with twenty-five perforations for similarly colored marbles in each colored section. The four triangular colored sections are blue, red, yellow and green. In the center of the marble game board is a circle, colored white, with eight perforations for eight white marbles. In the center of the white circle is a black circle with one perforation for one black marble. Provided with the game are one die, one non see through cloth bag with drawstring, one marble game board, one black marble, eight white marbles, twenty-five blue marbles, twenty-five red marbles, twenty-five yellow marbles, twenty-five green marbles and one set of rules. Players roll die to see who goes first. Highest number picks a color and goes first. The other players play the color that is in front of them. All marbles are kept in cloth bag until picked. Each player rolls the die and picks same number of marbles. Players are not allowed to look into bag when picking marbles. The player that fills their colored section with their own colored marble first wins.
